CONTACT	

One of our strengths is to design and manufacture customized, special constructions of the highest quality standards.

Individual light tunnels, fully equipped workstations as well as individual working tables, mobile light walls and control cabinets are the most demanded categories.

Most of the Visomax working tables are individually designed and manufactured based on the unique specifications of our clients. The design is mainly determined by the individual parts and production assignments of our customers.

The styling is always driven by ergonomics and the useful integration of the required tools and consumables that are needed to do the job on site.

Based on our technical expertise and long term experience we'll be your consulting partner during your project.

As soon as a "standard solution" doesn't apply for you, either our mobile light wall "Compact", the light wall "Compact 45°" or the "Light Wall 45°" are the ones to go for. Our light walls can be individually adapted to our client's situation and constructed accordingly. The light walls may vary in their construction, dimensions, control or in the type of lamps being used.

A stationary light tunnel is what we offer to all of our clients who need more than just mobile versions.

The customized design and construction also applies for some of the stationary light tunnels that we offer. It's all based on the individual requirements of our customers.

Our client base includes automotive OEM plants, the aerospace industry, body and paint shops as well as high-quality after-market detailers.

CUSTOMIZED CONTROL CABINETS

In addition to our standard control cabinets, we also offer customized control cabinets that will be specially designed to our customer's needs. They can vary in design (with display / without display), size and functions depending on the application.

CUSTOMIZED FRAMES

We guarantee a perfect finish and for this we offer customized frames and designs with the aim to illuminate painted surfaces as perfect as possible.

The variable and flexible angle adjustment from zero to 90 degrees enables our clients to really highlight all potential imperfections in the painted surface ... and to finally correct them.

Every customized frame is equipped with wheels to make it as mobile as possible.
