„FOR ME, PERFECTION IS DECISIVE WHEN I DO SOMETHING...
AND NOT THE TEMPO. IF I DO SOMETHIN THEN I'LL
WANT TO DO IT PERFECTLY.
WHEN I DO SOMETHIN PERFECTLY, I ALMOST
INEVITABLY DO IT VERY QUICKLY“

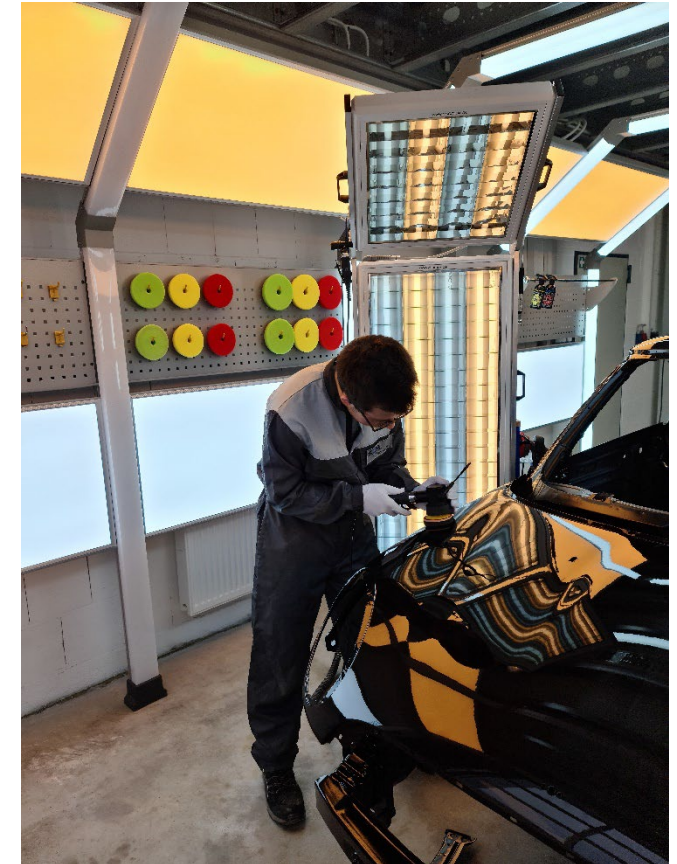

Walter Röhl

PHILOSOPHY

Our philosophy is simple:
Visomax Coating GmbH products are designed
for people who like things to be individual, uncomplicated and,
above all, efficient. For people who enjoy quality and perfection every day.
There is no suitable word for what we do.
"Innovation" doesn't really hit the mark and striving for perfection would be too much.
We don't compromise on anything. For us, the perfect finish is a matter of the heart.
Our team develops, creates and works with passion,
commitment and the famous thinking outside the box.
Products and processes are optimized at short intervals and adapted to customer.

Our aim is to develop, offer and integrate individual and customized process solutions for industry and the manufacturing sector worldwide. Based on the large selection of components (abrasives, polishes, etc.) and the machines (pneumatics/electrical) we offer our customers the right solution from one source.

The internal quality and process flows are controlled in our company according to Quality management DIN ISO 9001:2015 & Environmental management DIN ISO 14001:2015 documented and regularly certified.

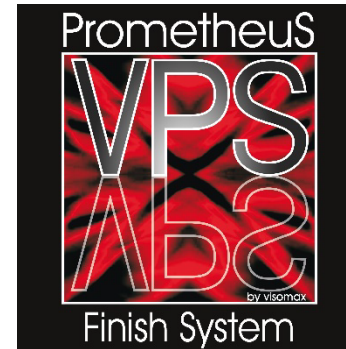

-  founded in 2003
-  30 employees
-  over 1500 customers from 31 countries
-  sales partner in USA, China, France, England, Mexico and South Africa
-  supply of 26 automotive plants worldwide

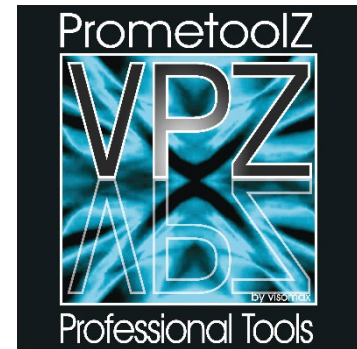

Visomax AbraxX –
the brand for
professional and
fast sanding

Visomax ClearE –
the brand for
professional
cleaning, care
and smart - repair

Visomax PrometheuS –
the brand for
outstanding and
professional polishing
process

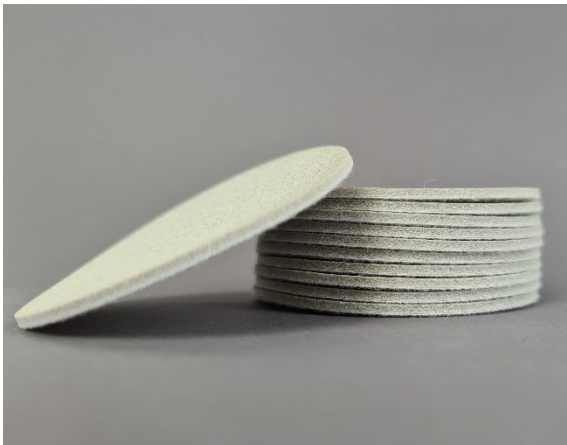

Visomax PrometoolZ –
the tool brand for
professional
application

Our abrasives are designed and manufactured according to the specific application. Depending on the product, they are available as adhesive or velcro in various types, sizes and shapes.

These include:

- Film abrasives
- Abrasive on paper carrier
- Foam laminated products
- Foam bonded abrasives (abrasive pads)

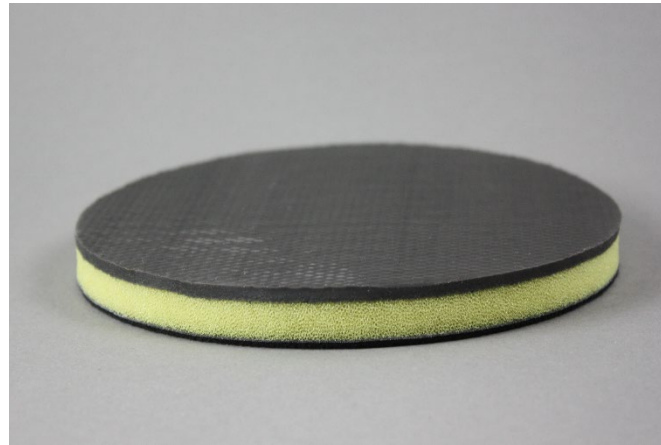

ClearE CLEAN + REPAIR

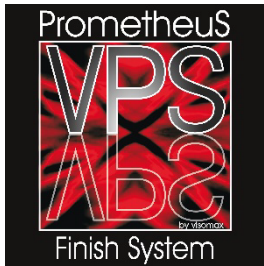

Our products are suitable for all professional applications where performance, cleanliness, speed and economy play an important role. The professional use of our professional leather and textile repair system is imparted by intensive training in our company.

Areas of application

- repair of leather interior
- textile interior designer
- plastic repairs
- lacquering of leather surfaces
- preparation of riding saddles
- general vehicle care and cleaning

Prometheus FINISH SYSTEM

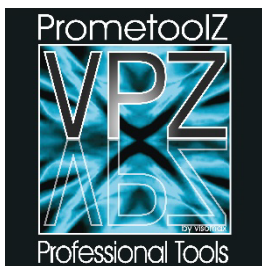

Our VPS products are suitable for all professional polishing applications where efficiency, cleanliness, speed and economy play an important role. Our range includes polish pads, polishes and microfiber cloths, all possibilities to develop the perfect process for you.

Areas of application

- automotive industry
- supplier industry (e. g. plastic attachments)
- shipbuilding
- furniture industry and joineries
- instrument making

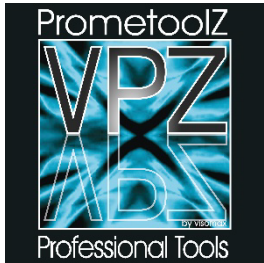

In order to implement professional machining concepts, coordinated components are required. Our PrometoolZ machine series is suitable for professional use where efficiency, cleanliness, speed and economy play an important role. The technical features of the VPZ series fulfil the industrially required standards with regard to vibration values, air and energy consumption in combination with partially almost silent operation.

Areas of application

- automotive industry
- supplier industry (e. g. plastic attachments)
- shipbuilding
- furniture industry and joineries
- production of high gloss interior for yachts and airplanes
- aircraft construction

To enable you to work even more efficiently with our VPZ series, we plan, design and manufacture polishing time controls, lighting systems and switchgear in-house. Thus we offer you the highest degree of quality, precision and flexibility.

Our range of services also includes worldwide project support, assembly and commissioning of your systems.

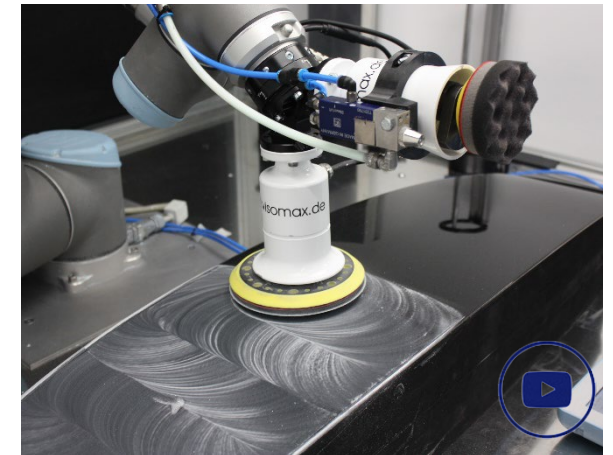

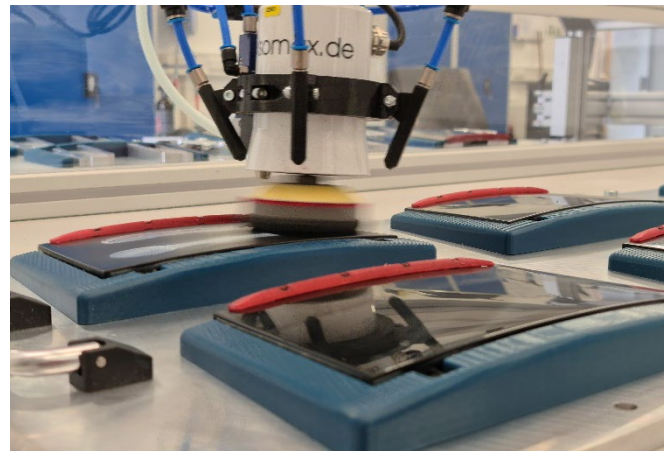

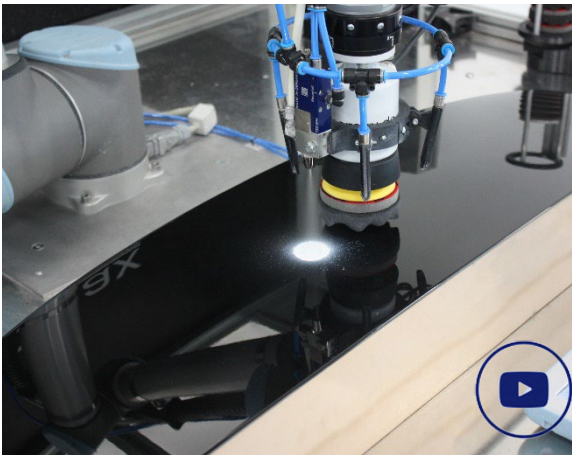

To make the finishing process more efficient as batch sizes/quantities increase, we offer solutions for automated polishing of surfaces. Using CAD data provided, the possibilities and variants of the automatic polishing process can be virtually simulated in advance.

Depending on the geometry and surface quality, the part is then processed over its entire surface (VBU-HG) by the robot or the defects are detected by a camera system and polished at specific points (VBU-P). In order to guarantee the stability of the process, our Visobot Units are equipped with an integrated padwasher and a pad changer.

With us you get everything from one source. We support you in process development, in the selection of grinding and polishing materials and accompany you up to the finished, compact robot system including its implementation.

RANGE OF SERVICE

We offer you individual all-in solutions from one source

Profit from our many years of experience

Regular and personal contact with our application engineers

Fast and efficient problem solving

ISO-certified quality management according to DIN ISO 9001:2015

ISO-certified environmental management according to DIN ISO 14001:2015

Sales Partner in

USA, China, France, England, Mexico and South Africa
