

LIGHT CONCEPTS

**PROFESSIONAL  
LIGHTING**

# ILLUMINATING

Practical experience for use in practice: Whether it's development, production or sales, Visomax works hand in hand. Our range of products is diverse, advanced, and covers every work step in the finishing area. Visomax products are designed for users who want simplicity and efficiency, and who strive for perfect quality above all else.

What really matters in a **paint shop**? Better lighting systems and having all necessary tools in one place and within reach. This is achieved by using individually adjustable light scenarios so that paint irritants such as dust marks, orange peel, etc. can be easily detected and removed at any time on both bright, highly reflective surfaces and dark surfaces that absorb 80% - 98% light.

The solution? Mobile light walls and professional lighting solutions by Visomax. The result - huge time savings for employees, who can instead devote themselves to their tasks. Not to mention the associated economical aspects. What company doesn't want to save time?  
Everybody knows: **Time = money.**

# ECO

## **The solution for every paint shop!**

The ECO light wall series consists of three variants, which are finished using stable yet light aluminium.

Plus, all of the light walls from the ECO series are equipped with wheels, making them mobile throughout the workshop. The models are continuously dimmable and offer both cold and warm adjustable lighting. Defects on high-gloss surfaces can be caught in the blink of an eye thanks to the reflective grid.

The built-in LEDs are extremely energy efficient and use significantly less energy than traditional incandescent and fluorescent lights.

# OEM

## The professional!

Precise and efficient quality control, developed for use in challenging production environments, these lights provide a reliable solution for identifying defects and irregularities.

The OEM mobile light wall series is also dimmable, with both warm and cold lighting that can be dimmed separately. Test lights also contain the most up-to-date LED lighting technology, which ensure even illumination of surfaces. This guarantees precise inspection without shadowing or glare.

OEM mobile light walls make it much easier to carry out work after painting. The light is also extremely well-suited for use when removing dents.

# MIX

## Mix & Match!

Two lights combined in one model. Both surface control lights perfectly illuminate any defects that occur during painting.

The colour intensity can be adjusted for ideal illumination. The dimmer scale ensures process stability during the inspection process. Innovative hologram technology enables you to look at finished works under optimum conditions so that you can achieve a flawless result.

With its precise illumination and ease of use, this light series will help you to optimize the quality standards of your production and achieve first-class results.

# STANDARD? NEVER!

Since our company was founded in 2023, anyone who knows us would say with certainty that achieving the perfect finish is a labour of love for us. Our team develops and creates with passion and commitment so that we can offer you tailor-made solutions.

# WORK TABLES

---

Almost all Visomax work tables are customer-specific developments, which have been designed based on customer specifications and the parts being inspected and processed. We always consider ergonomics when designing a workspace, and integrate necessary tools and materials into the work table in a way that makes sense.

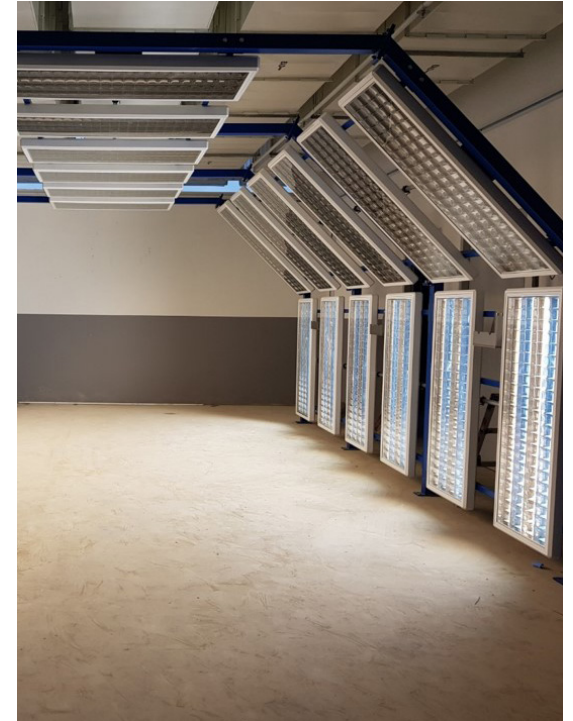

# LIGHT WALLS

---

These light walls are individually adjusted to the customer's specifications on site, and then produced accordingly. They may vary in construction, size, control, and also in terms of built-in lighting.

# LIGHT TUNNELS

The light tunnels are also individualized and are customer-specific products that we design and produce based on the customer's needs. Our customers include OEM plants, paint shops, and also high-quality vehicle finishers.
